

No-Acid Ultra

Acid Neutralizer for Air Conditioning and Refrigeration Systems

Intertek

LABORATORY TESTED

NO-ACID ULTRA is the new Neutralizer that completely eliminates acid residues in Air Conditioning and Refrigeration Systems and reduces the level of moisture.

It is more powerful than its previous version (NO ACID): its new formula neutralizes and blocks the ions with only 1/5 of the volume that was previously necessary. This allows the operator to use **NO-ACID ULTRA** together with other additives, reducing the volume change of the Lubricant.

The acidity in a System is normally generated by the natural decomposition of the gases and Lubricants in it: these derivatives can react to the moisture that is normally present, forming organic, carbonic, hydrochloric and hydrofluoric acids. Those latter have a very high aggressiveness towards the metals and cause the formation of leaks or the breaking of the compressor, in the most serious cases.

NO-ACID ULTRA is an excellent remedy thanks its double action of acidity regulator and humidity subtractor.

We recommend using Errecom ACID-TEST to determine the best amount of **NO-ACID ULTRA** to be used as a correction.

Connect the adapter to the low pressure service port, then connect the syringe to the adapter, insert **NO-ACID ULTRA** into the System and let it run normally. In case of very high pressure, help yourself by pumping down.

NO-ACID ULTRA must not be recovered: it works once inserted. Any excess of product remains in the system as a future prevention.

Dosage:

Low Acid Level (pH >6,8) 6 mL (0.2 fl oz) of NO-ACID ULTRA each 2 litres (64 fl oz) Lubricant;

Medium Acid Level (6,8 > pH > 5,2) 6 mL (0.2 fl oz) of NO-ACID ULTRA each 1,5 litres (48 fl oz) Lubricant;

High Acid Level (pH < 5,2) 6 mL (0.2 fl oz) of NO-ACID ULTRA each 0,7 litres (24 fl oz) Lubricant.

In case of very high acid levels, use ACID TEST 15 minutes after having inserted **NO-ACID ULTRA**: if the acidity is still present, repeat the addition again, according to dosage.

After a treatment with **NO-ACID ULTRA** and in case of high acidity level, it is recommended to add also EXTREME ULTRA which is a Leak Stop for Refrigeration and Air Conditioning Systems. This helps in preventing or stopping any micro leaks generated by acidity.

NO-ACID ULTRA is a product for professional use, wear gloves and glasses during all phases of use.
